

Registry Management System(RMS)

User-Friendly, Powerful and Flexible Registry Software

The Most Advanced Registry System

RMS is advanced web based data capture and Management software for collecting, managing and reporting data.

RMS has powerful and flexible design options and features for registry databases allowing you to create Web Based Forms and Questionnaires without the need for computer language programming expertise.

RMS is compliant with 21 CFR Part 11 and includes a complete audit trail, tracking and management features which make it ideal for patient registries or any other type of Registry and post-marketing studies.

RMS is...

- Web Based Application
- User-friendly
- Secure and Robust
- Multi OS (Windows & Linux) & Multi Databases (MS SQL, Oracle, Sybase & MySQL) System
- Multi Languages Application

RMS can...

- Work with Multiple Browsers (IE, Firefox, Chrome & Safari) & Multiple Resolutions
- Manage all your Registries / Study databases in one application.
- Improve data collection efficiency, minimize data entry errors and optimize/standardize the data collection process.
- Manage electronic data capture through the built in configurable work flow
- Generate required output data for submission

RMS offers...

- Separate Screening Form for Online Enrollment, Participant Portal for Online Questionnaire Data Entry & Admin Portal for Administration.
- Rapid design and implementation of registry databases
- Flexible design and configuration options to meet the needs of data collection processes and improve data Quality
- Powerful and unique design features for creating Forms, Sections, Widgets and Fields (Simple & Advanced) to optimize you data entry process.
- Activity Logging and Tracking
- Complete Audit Trail
- APIs for integration with any 3rd party system / application
- Comprehensive Training and User Guide
- Technical Support and rapid response time for peace of mind
